IT Security made in Germany: The SixSense digital vehicle access and authorization system from Huf awarded the TeleTrust seal

Velbert, Germany, August 2018 **The digital vehicle access and authorization system from automobile supplier Huf offers IT security in line with the highest German IT security standards. This is now confirmed by TeleTrust “IT Security made in Germany” trust seal.**

Maximum security in line with the German industry standard; that is the basis of the SixSense access and authorization system from Huf. This has now been confirmed by the TeleTrust seal awarded by IT Security Association Germany.

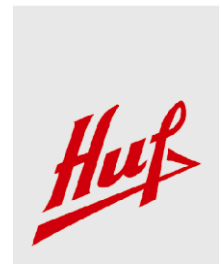

SixSense is characterized by a secure and highly reliable private cloud infrastructure that always guarantees continuous and smooth operation. Furthermore, physically and digitally protected datacenters located in Germany ensure comprehensive data security.

The TeleTrust competence network consists of national and international members from industry, administration, and research as well as partner organizations with similar objectives. With its broad base of members and partner organizations, TeleTrust embodies the largest competence pool for IT security in all of Germany and Europe.

The SixSense access and authorization system offers the best possible service for automobile rentals and fleet management. Access to vehicles is guaranteed round-the-clock thanks to software that is integrated with existing systems. Users can reserve, start, and return vehicles using the customizable mobile app. Here, the personal, time-based user rights are granted and transferred digitally, which means that there is no need to hand over a physical key. Once the digital key has been transferred, it is also possible to use the vehicle without an Internet connection. This offers advantages for the vehicle user, while enabling car rental companies to broaden their field of business at the same time.

Huf Group worldwide

Founded in 1908 in Velbert, Germany, the Huf Group now consists of 25 companies across Europe, America, and Asia. With a revenue of EUR 1.5 billion, Huf currently employs over 7,800 people worldwide. Approximately 800 of these work in Huf development centers in Germany, Romania, China, USA, Korea, and India. Over 1,400 employees are based at the headquarters in Velbert.
